### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Finestone et al. (US 6,652,984 B2).

Finestone discloses a paper-plastic-paper laminate sheeting capable of being converted into envelopes, grocery bags and other dilatable container products that initially are in a flat state and are normally made of paper, and the exterior surfaces of the laminate sheeting are printable (abstract). The plastic film is an oriented polymer material (col. 2, line 12) such as polypropylene, polyethylene and polyester, and has a thickness of 0.5-3 mils (col. 3, line 42). The two paper sheets are cold-laminated on the plastic film by a water-based adhesive so as to produce non-curling laminate sheeting (col. 2, line 21). The water-based adhesive comprises a vinyl acetate ethylene copolymer (claim 3). The operating speed for production of the laminate sheeting is 150-500 ft/min (col. 5, line 42), wherein the operating speed of the current invention (200-300 ft/min) is within the range of the Finestone. The operating speed is directly related to the paperweight (col. 5, line 44); therefore, the paperweight of the claimed invention would be included in Finestone.
